Bel Air Forest

Application ID: LF-11342

The Narrative of Bel Air Forest:

The effects of the Black Butterfly have caused the massing of urban heat islands throughout Baltimore, establishing long-term effects on public and environmental health. Redlining has removed mass amounts of forest land within the city of Baltimore. What defines an urban forest? How can a forest be embodied within Baltimore? The narrative of Bel Air Forest establishes an Urban forest with the use of the cities forest program, spreading throughout the neighborhood from Old Town Mall. The urban forest challenges the existing grid by forming a new grid determined by a forest. Using the old commercial hub of Baltimore, Bel Air Forest provides a starting point for the reforestation of Baltimore.

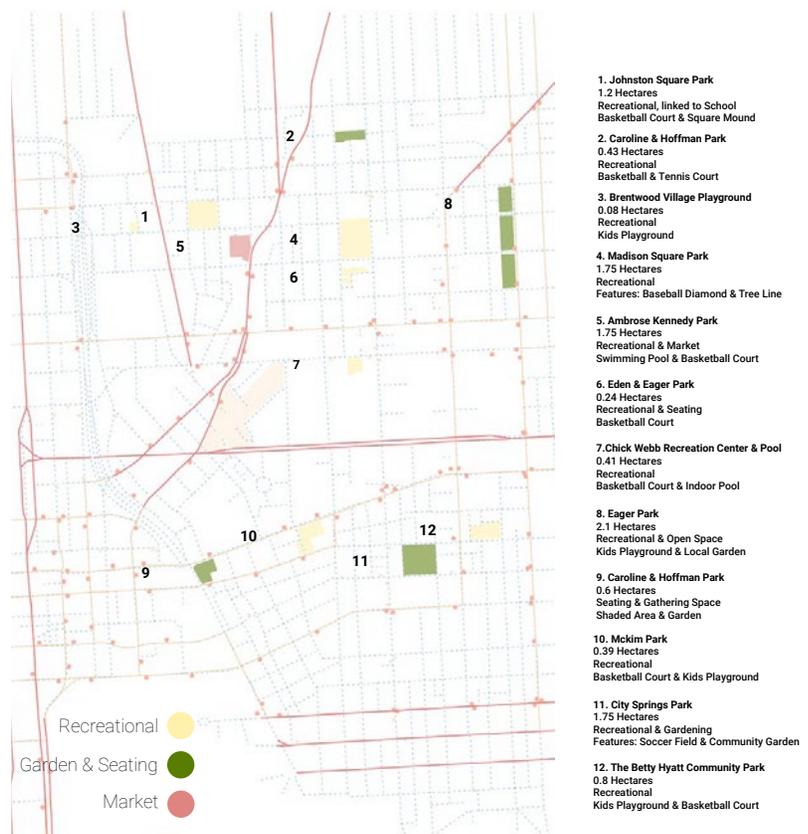

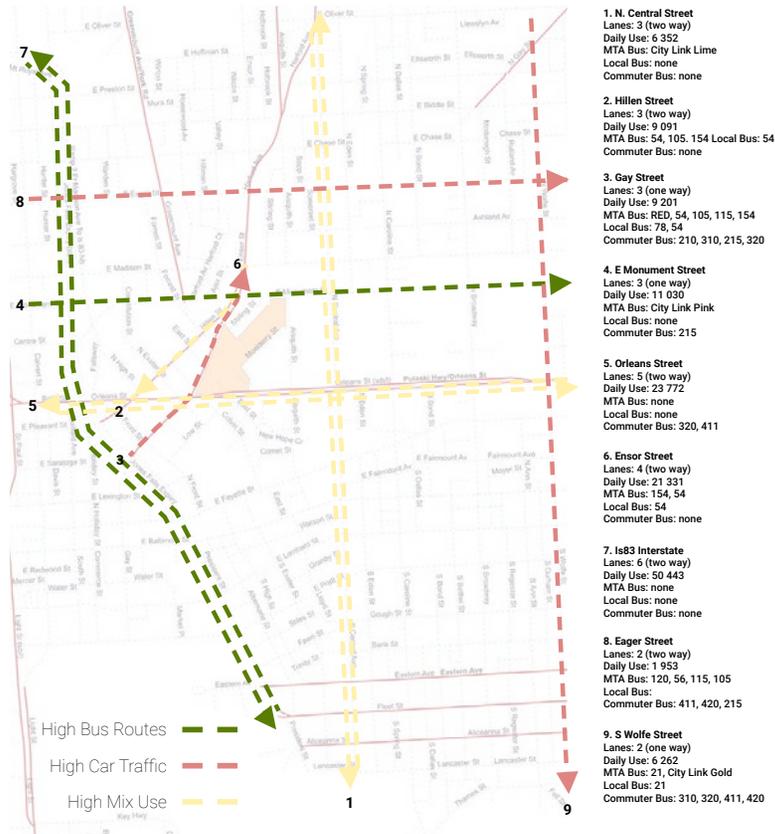

Program for Bel Air Forest:

The Bel Air Forest program looks to restore Bel Air Market/ Old Town Mall alongside the city's goal of 40% canopy within Baltimore. Both elements would bring a pedestrian focus to the area, strengthening youth/community programs. The reforestation plan provides new job opportunities based around horticulture, agriculture, and forestry, expanding the existing forest over time. The job opportunities would include education-based programs, establishing a school within the area. The school would generate a research program that shows the effects of urban heat islands and reforestation within Baltimore. The school would be connected to a greenhouse and a community kitchen, working alongside the Baltimore Farmers Market.

History of Bel Air Market & Analysis of Old Town Mall

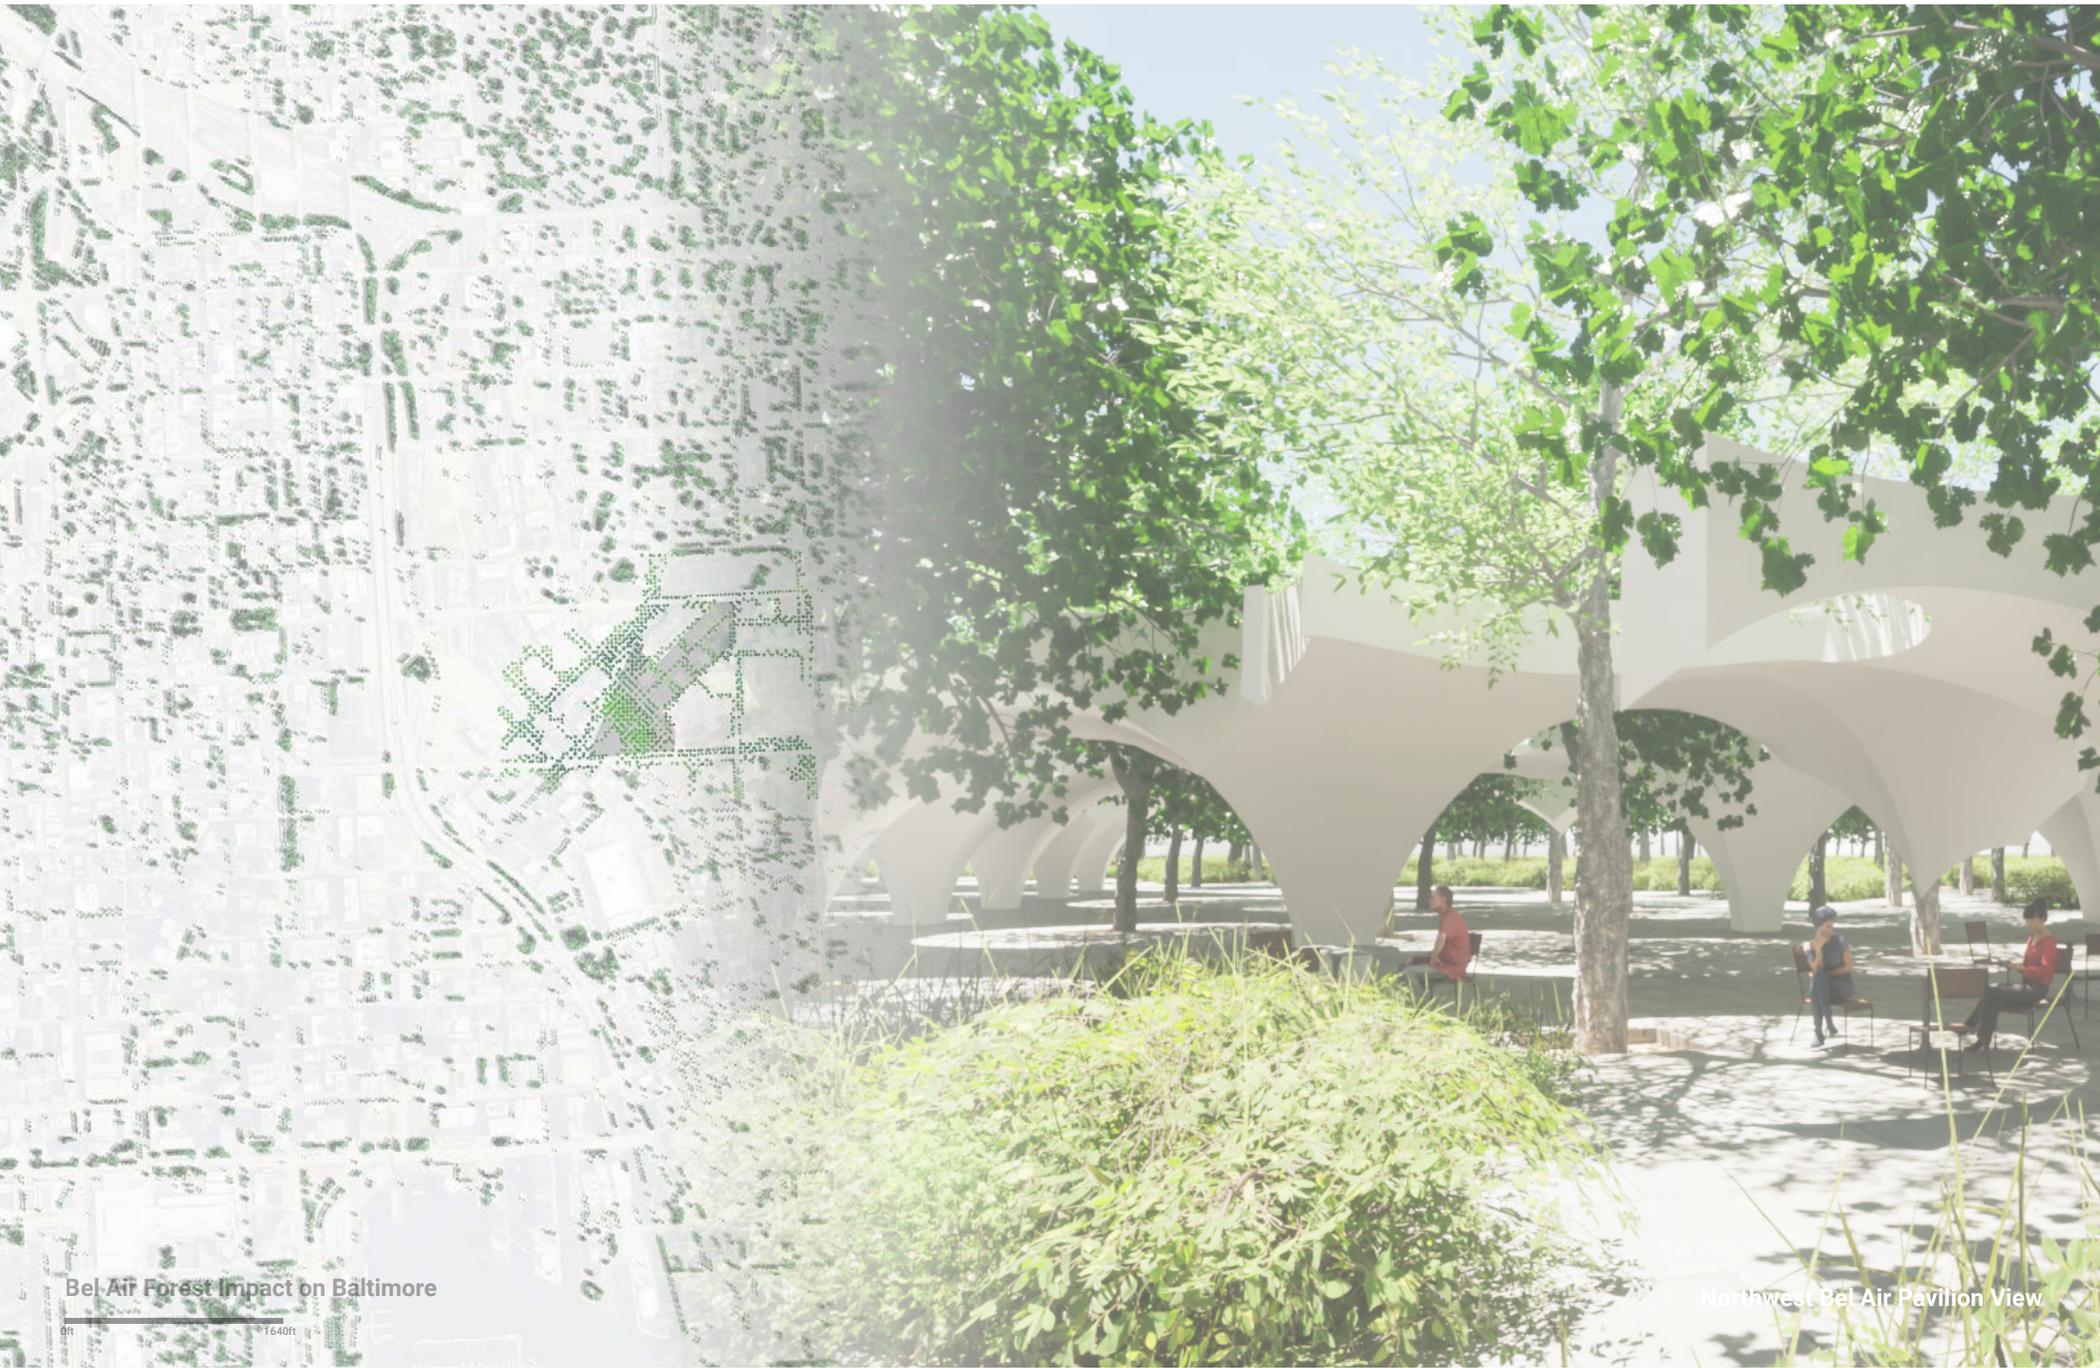

1818	1820s	1869	1883	1938	1950	1964	1970s	1990s	Today
The Bel Air Market was constructed in 1818, having the area become the commercial center for Baltimore.	Two story row house shops lined Gay Street, just north of Bel Air Market.	Gay Street was mostly storefronts with first-floor awnings that span the sidewalk.	Businessmen formed an association, making improvements to Old Town by widening Gay and Orleans street.	A portion of the market was demolished for parking.	Interstate 83 finished construction, cutting off the surrounding neighborhoods.	The city banned open air vendors along the streets surrounding the Bel Air Market.	Old Town Mall was created by closing Gay Street and building ground pedestrian walkway.	The Bel Air Market closed altogether.	Today, the Farmers Market is located under Interstate 83.

With the commuter routes going around Old Town Mall, the buses are limited to 310, 320 routes. The lane use for the amount of people that pass through the space is too much, only having 23 772 on Orleans Street. With no MTA or local buses on Orleans street, it indicates high car traffic.

The largest greenspace is Eager Park and sits along N Wolfe Street. The park has no form of canopy, creating an undesirable space during the summer.

The greenspaces and schools connecting to Old Town Mall provide a halfway point for the surrounding area to meet. Without Old Town Mall, a void is created between the spaces, strengthening the spatial divide between the surrounding communities

Reforestation Plan:

The reforestation plan would impose 3 separate grids over Old Town Mall, creating a greater focus on pedestrian use. The different levels of canopy would reduce the vehicular use to one-lane, providing breathing room for both the forest and pedestrians. The forest canopy grid would use the existing dimensions for Baltimore reforestation plan, spacing trees 4.5 m apart. The second and third grid would create density and generate different spatial programs throughout the site.

Forest Canopy

Grid: Old Town
Spread: 8 m
Spacing: 4.5 m

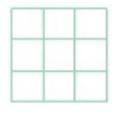

Mid-story Canopy

Grid: City
Spread: 6 m
Spacing: 2 m

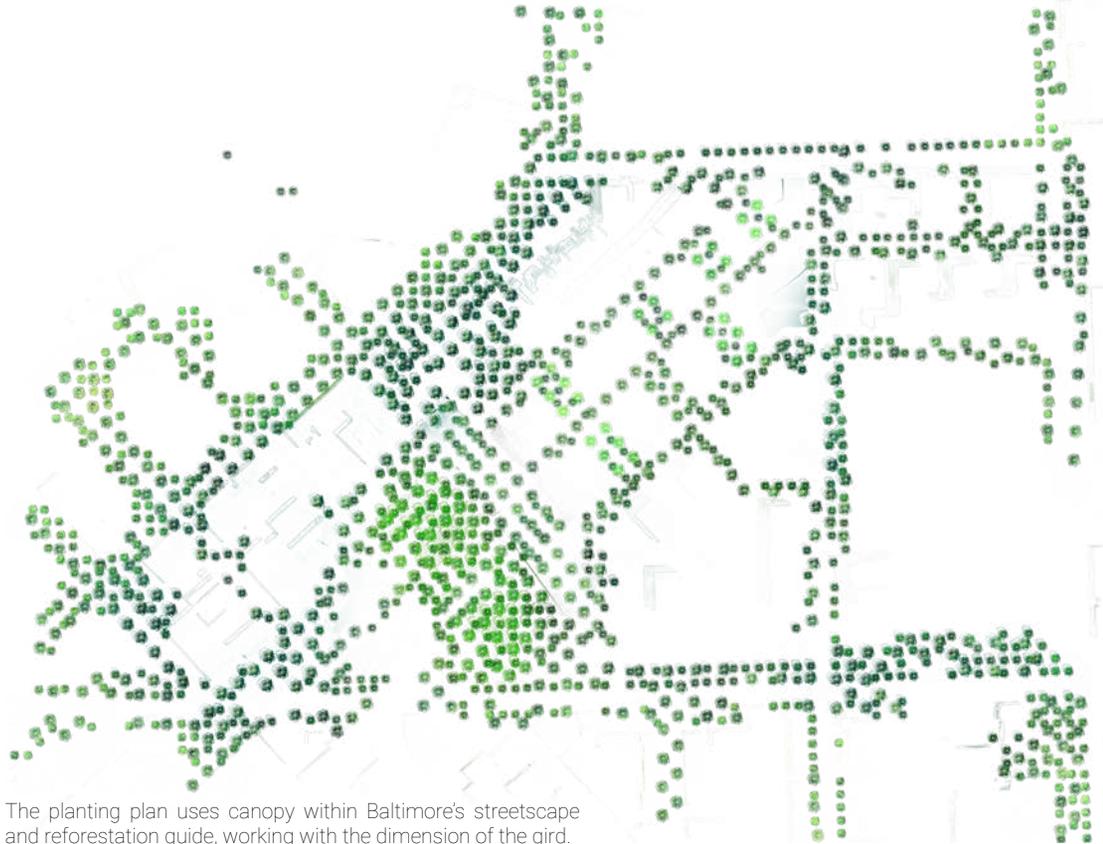

Underforest

Grid: Old Town
Width: 1.5 m
Spacing: None

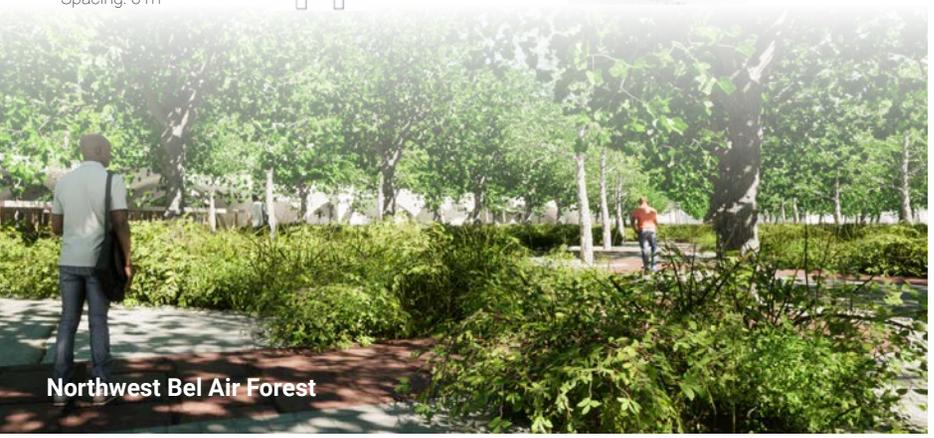

Forest Path

Grid: City
Width: 2 m
Spacing: 6 m

The planting plan uses canopy within Baltimore's streetscape and reforestation guide, working with the dimension of the grid.

Old Town Mall Restoration:

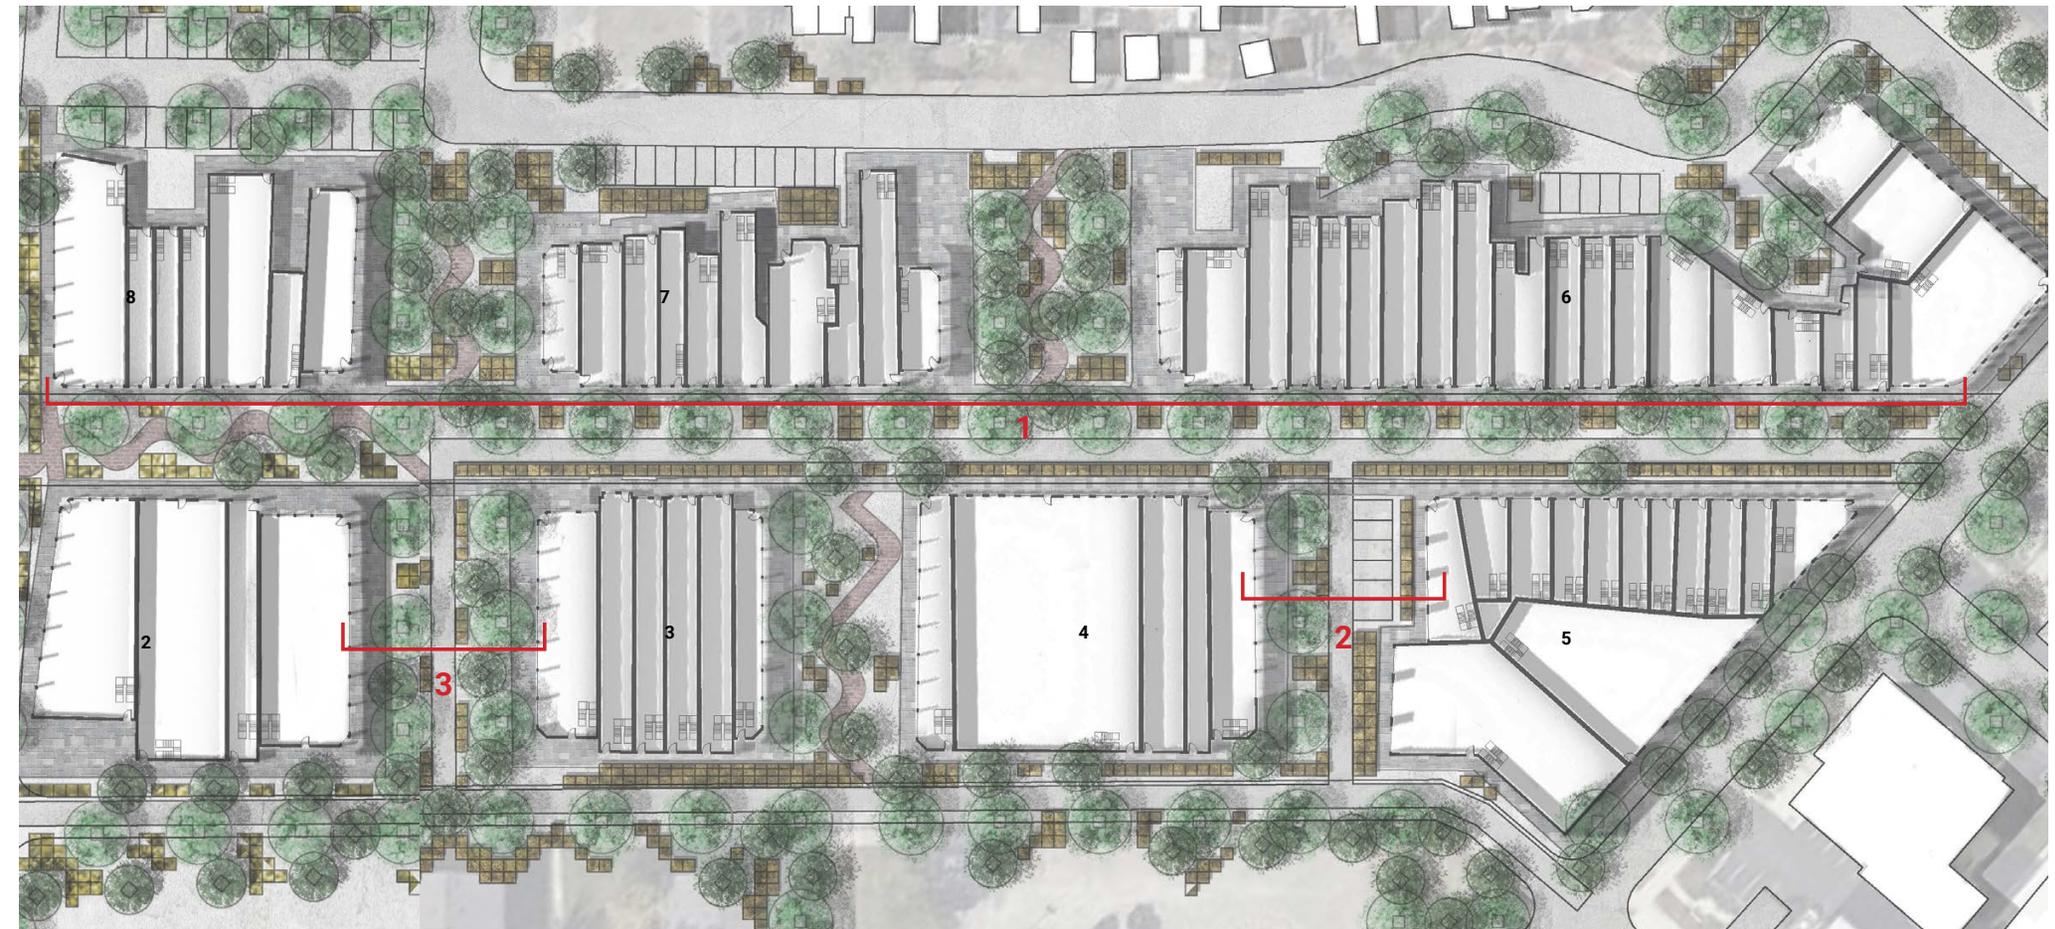

The restoration of Old Town Mall would reintroduce the core form of the Bel Air Market. The reintroduction of the built form from 1870, existing context, and the Reforestation grid; provided a sequenced spatial program, forming one identity. The spatial program was determined by the Reforestation grid, having the built form and use complementing the forest identity. For example, courtyards developed between buildings, allowed the forms facing into the space to become restaurants and coffee shops, utilizing the mid-story canopy as gathering spaces. Another example would be the corner of the site, creating an educational and research space that utilized the streetscape and open forest.

Bel Air Market Restoration:

Restoring Bel Air Market would place a pavilion onto the 1870 farmers market site. The structure would be influenced by the reforestation plan, integrating the grid into the form. The Bel Air Pavilion would look to strengthen the site lines, having the form carved out by the forest grid system. Th pavilion would provide space for the existing farmers market underneath the 83 Express Way and other events by the community.

Bel Air Forest View of Pavilion

Bel Air Pavilion Interior:

The interior of Bel Air Pavilion provides for numerous market stalls, creating a sense of enclosure from the surrounding Bel Air Forest. Rain runoff would feed into the roof using the water retention plan built into the columns, maintaining precipitation on warmer days. During the colder seasons, with the support of Bel Air Forest, the pavilion would provide protection from the winter winds. The pavilion when not in use from the markets provides a gathering space for other public interests such as concerts or public art displays.
